

## **Wynn Macau, Limited**

*(Incorporated in the Cayman Islands with Limited Liability)*

### **Supplier Environmental Standards**

Adopted on 28<sup>th</sup> November 2025

#### **1. INTRODUCTION**

Wynn Macau, Limited (the “Company”) and its subsidiaries are dedicated to minimizing its environmental footprint and expect the Company’s suppliers to adopt a similar commitment to environmental sustainability. The following environmental practices must be adopted by the Company’s suppliers.

#### **2. REGULATORY COMPLIANCE**

Suppliers must obtain, maintain, and regularly update all necessary environmental permits and registrations covering all applicable environmental aspects, including, for example, those related to discharge and disposal monitoring. Compliance with these permits is essential, and suppliers must adhere to both their operation guidelines and reporting requirements. Any changes to permits or deviations in compliance must be promptly addressed to ensure continuous adherence to environmental regulations.

#### **3. WASTE REDUCTION AND RESOURCE EFFICIENCY**

Suppliers should actively seek ways to reduce or eliminate waste at its source, including the efficient use of water, energy, and other resources. This can be achieved by revising production processes, maintenance routines, and facility operations, as well as adopting conservation practices and substituting materials, prioritizing recycling, and reusing materials wherever possible.

#### **4. WASTEWATER AND SOLID WASTE MANAGEMENT**

Wastewater and solid waste generated through industrial processes, sanitation, and daily operations must be carefully managed and treated before disposal or discharge. Suppliers must ensure that waste is handled in compliance with legal requirements and environmental standards, minimizing its impact on ecosystems and human health. Regular monitoring should be in place to ensure that treatment processes are effective and continuously improved.

## **5. HAZARDOUS MATERIALS MANAGEMENT**

- 5.1 Suppliers shall identify any chemicals or materials that could pose a threat to the environment and ensure they are handled, stored, and disposed of safely in compliance with legal requirements.
- 5.2 Measures must be in place to prevent the accidental release of hazardous substances, and recycling or reuse options for these materials should be explored where feasible. Proper labeling, storage, and transportation protocols must be strictly followed to mitigate environmental risks.

## **6. GREENHOUSE GAS (GHG) EMISSIONS REDUCTION**

Suppliers are encouraged to actively minimize their GHG emissions throughout their value chain. This includes identifying opportunities to reduce carbon footprints within production processes, logistics, and supply chain operations. Suppliers should explore carbon reduction strategies to continuously lower their emissions.

## **7. AIR EMISSIONS CONTROL**

Suppliers must monitor, control, and treat emissions of volatile organic chemicals, aerosols, particulates, corrosives, and other harmful substances, generated by their operations. These emissions should be characterized and treated using appropriate technologies to ensure they meet or exceed industry and regulatory standards before being released into the atmosphere.

## **8. COMPLIANCE WITH ELECTRICAL AND CONSUMER PRODUCT STANDARDS**

Suppliers that manufacture electrical products for consumer use must ensure these products meet all local safety and environmental standards. This includes complying with energy efficiency ratings and other environmental certifications that reduce the impact of these products throughout their lifecycle.

## **9. SUSTAINABLE PACKAGING**

Suppliers should prioritize environmentally responsible packaging materials that are biodegradable, recyclable, made from recycled materials, or derived from renewable resources. Excessive or unnecessary packaging should be avoided to minimize waste and energy consumption. Suppliers should invest in packaging innovations that reduce the overall environmental impact of their products, from production through to consumer use.

## 10. BIODIVERSITY CONSERVATION AND LAND USE

Where applicable, suppliers should make efforts to prevent biodiversity loss and land degradation and mitigate deforestation. Suppliers should adopt sustainable land management practices and aim to minimize the environmental impact of their operations on natural habitats, wildlife, and forests. Whenever possible, operations should be conducted in a way that promotes the preservation of ecosystems and biodiversity.

## 11. THE SUPPLIER ENVIRONMENTAL STANDARDS REVIEW

The Company's executive management will be responsible for reviewing and updating the Supplier Environmental Standards periodically to ensure its continued relevance and effectiveness.
